The post-

The Darwin Deason Institute for Cyber Security is launching a new Cyber Autonomy Range, supported by IBM, to provide an in-kind contribution of software and support valued at $850,000+. The project is designed to toughen aut

classroom experiences: in-person, online, synchronous remote, lecture capture, and everything in between. Lyle is building additional technology-enhanced Smart Classrooms that will allow for a larger offering of graduate courses and will further enable education that transcends physical boundaries classrooms where in-person, remote students and faculty members can seamlessly interact and collaborate. This enhanced student experience will allow our graduate and professional students the flexibility to choose the learning format that best suits their needs.

Sincerely,

Elizabeth G. Loboa, PhD
