forth teaching and research in the domain of creative and interactive technologies. In some respects it is akin to a program or a center serving the entire university (a center for Twenty-First Century Studies, for example, or one for the Future of Cities), but it differs from a center in that it may house faculty. NQuiry should not be a school, however, because it must not be perceived as in competition with other units in the university. Structural and organizational suggestions are elaborated more fully below.

NQuiry will harbor ongoing innovative research in the extraction, manipulation, and deployment of data in the service of larger questions and challenges facing humanity in the twenty-first century. NQuiry additionally champions creative expression in and of itself and as a component of problem-solving.

We live in an age of information overload; everyone now broadcasts information instantaneously, but no one, including companies such as Facebook or Google, has as yet devised an automatic way to arrive at a consensus, or to distinguish fact from fiction. Historically, MRJSVQ EXMSRcSZI VPSEHcLEWc TVSHYGI HcPETWVWcMRcORS[P HKI cERHcV WYPXMRKcJEMPYVI WcXScEGXDuring the renaissance, discoveries of new plant specimens were so numerous that the existing encyclopedias failed to keep up with them— failing to keep track of new plant discoveries for a hundred years, before Linnaeus came along with a new system capable of organizing the whole./ YWXVSc SYVS[Rd VEcSJcMRJSVQ EXMSRc SZI VPSEHcV UYMWMXcERcMRXKVEXI HcV WTSRW cSolutions to information overload will come from computationalists who understand Aristotle as well as C++. In fact, no other institution or center has the UGEE YWVE Ol!3(TM™ñ "3^pÐ •

Humanities provide critical, content-rich engagement with data. Each will build on the others with, for example, the digital humanities providing social science data about democracy to be visualized in Creative Computing, or turned into educational video-games for elementary school students at the Guildhall.

| Research will be seeded by new competitive funding opportunities for the incubation of innovative methods in labs that promote interdisciplinary work. Funding may come from local agencies, museums, businesses, and organizations in the form of projects and/or material support. We will also invite first-class researchers from the strongest institutions in the world to spend postdoctoral or faculty fellowships at SMU.
